Neotectonics, volcanic provinces and major seismic belts of the world (Neotektonika, vulkanicheskiye provintsii i velikiye seysmicheskiye poyasa mira) [Moscow] Izd-vo Mosk. univ., 65. 0220 p. illus., biblio. Errata slip inserted. 2,500 copies printed

TOPIC TAGS: seismicity, earthquake, geodynamics, tectonics, *EARTH CRUST*

PURPOSE AND COVERAGE: The book acquaints the reader with phenomena, particularly seismic and volcanic activity, within the earth. The book presents a classification of recent structures of the earth's crust, developed by the author during the past three years, and discusses laws governing the formation of these structures. Presented in popular form, the book may be of interest to a wide circle of readers, and may also serve as an aid for students, geology instructors, geographers and other specialists in earth's sciences.

Presented in popular form, the book may be of interest to a wide circle of readers, and may also serve as an aid for students, geology instructors, geographers and other specialists in earth's sciences.

TABLE OF CONTENTS (abridged):

Foreword -- 3

Pt. 1: Life of the earth's crust

Ch. I. Composition of the earth's crust and its recent structures -- 5

Ch. II. Basic laws governing vulcanism and seismicity in recent tectonic structures of the earth's crust -- 17

Pt. 2: Thousands of volcanoes of the world

Ch. I. Volcanoes resulting from land-ocean processes (volcanoes of alpine folded mountains) -- 29

Ch. II. Volcanoes of ocean basins -- 87

Ch. III. Volcanoes born on continents (continental group) -- 115

Cont 2/3

ACC NR: AN5012447

Ft. 3: Millions of earthquakes of large seismic belts of the world:
Ch. I. Earthquakes bordering continents and ocean basins -- 146
Ch. II. Earthquakes in ocean depressions -- 171
Ch. III. Earthquakes in central continental regions -- 182
Conclusion -- 199
Bibliography -- 210

Galena in the sedimentary deposits of Verkhne Chusovskii Gorodok. A. A. Antolova. Doklady Akad. Nauk S.S.S.R. 50, 843-846 (1957); Chem Zentr 1048, I, 810.
An investigation was made of the Pb-contg. minerals of the different strata of ores of a salt-bearing basin on the right bank of the Chusovaya River in the north in Ural region. Galena was found in the limestone strata at depths of 500-40 m. The Pb content of the ores varied from 0.04 to 0.74% and decreased with depth. It is assumed that this galena has sepd. from hot solns. in the fissures of the limestone.

APRODOVA, A. A.

Devonian sphaerosiderites. A. A. Aprodova (Central
Nauchno-Issledovatel' Lab. Ob'edineniya—Molotovsk).
Doklady Akad. Nauk S.S.S.R. 63, 445-8(1948).—The
Devonian sediments of the western slopes of the Urals and
in the river Kama region are interesting because of rich
deposits of bauxites and petroleum. In a complex contg.
dolomite are frequent sphaerosiderites, with spherules of 0.3
to 1.2 mm. diam., with quartz, feldspar, and pyrite inter-
grown. A typical bulk analysis is FeO 32.77; MnO 3.23;
MgO 0.47; CaO 0.35; Al₂O₃ 7.45; SiO₂ 34.48; SO₂ 0.56;
ignition loss 18.46% (52.8% FeCO₃). The marine origin of
the siderite-contg. rocks is certain. The structural details
of the Devonian syngenetic siderites indicate for their dep-
osition in colloidal forms. W. Rittel

The dependence of the chemical composition of porphyroblast-bearing carbonate rocks (of Kama region near Molotov) on porosity. A. A. *APPRODOVA*. *Doklady Akad. Nauk S.S.S.R.* 63, 48-7 (1940). -- The content of MgO shows little if any dependence on porosity of the rock. An increase of porosity usually accompanies the development of dolomite structure. The insol. residue content is highly affected by porosity; increase of the latter leads to sharply reduced amts. of the insolubles. G. M. K.

ORG: Institute of Mathematics, AN UzSSR (Institut matematiki AN UzSSR)

TITLE: Investigation of the statistical structure of the wind field in Central Asia and in Southern Kazakhstan

SOURCE: Meteorologiya i gidrologiya, no. 6, 1966, 36-40

TOPIC TAGS: atmospheric wind, cyclone, storm

ABSTRACT: The author has investigated the structure of the wind field at the earth's surface in Central Asia and the southern part of Kazakhstan at the time of an anticyclonic type of synoptic processes. In cases of particularly strong development of an anticyclone on its southern and southwestern peripheries there frequently are strong and stable easterly and northeasterly winds which in summer frequently cause dust storms, while in winter they cause blizzards. The paper gives a discussion of the aersynoptic conditions of formation of winds during clear and stable weather. Of great importance for the formation of a storm zone is the degree of development of the intruding cyclone and the extent of its penetration to the west. The stronger the intrusion, the better developed is the storm zone. The physicogeographic

ACC NR: AP7007039

conditions also are favorable for creating a zone of strong winds. The investigated zone lies between 37.5 and 50°N and 55 and 72.5° E. A regular net of 48 points situated at the intersection of meridians and parallels was selected for analyzing data. There were 30 cases of strong winds in 1961-1963 (16 in autumn-winter and 14 in spring-summer). This made it possible to gain an understanding of the pattern of development and propagation of the zone of strong winds and therefore has yielded data and an approach which can be used in the prediction of such strong winds. PERIODICAL: Referativnyy zhurnal, Fizika, no. 6, 1962, 52 - 53, abstract 6B369
("Uch zap. Kabardino-Balkarsk. un-t", 1961, no. 13, 155 - 161)

TEXT: The penetrating showers of cosmic radiation were investigated with
an apparatus consisting of a doubled Wilson chamber in the magnetic field, con-
trolled by a system of Geiger counters. The distribution of the transverse com-
ponents, P_t , of the momenta of θ^0 and Λ^0 -particles generated in these showers
was examined. The apparatus permitted the measurement of momenta up to 2 -
2.5 Bev/c. In all, 13 Λ^0 -particles and 11 θ^0 -particles were processed. For
their greater part, these particles were in the range of $P_t = 0.2 \div 0.4$ Bev/c.
The mean value of P_t was 0.516 Bev/c, and within the experimental errors did not
depend on the particle type.

TOPIC TAGS: cosmic ray particle, hyperon, K meson, particle production

ABSTRACT: The authors have determined the relative production rates in carbon, copper and lead targets of hyperons and K mesons by cosmic ray particles accompanying penetrating showers with the aid of a double Wilson chamber in an 8000 Oe magnetic field. The target was mounted between the two sections of the double Wilson chamber and the following decay processes were detected $\Lambda^0 \rightarrow p + \pi^-$, $K^0_1 \rightarrow \pi^+ + \pi^-$, $\Sigma^\pm \rightarrow \pi^\pm + N$. In a total of 2940 penetrating showers there were observed 54 unstable particles. The numbers of unstable particles produced in the different targets are consistent with the assumption that the cross section is proportional to the two-thirds power of the atomic weight, in agreement with the findings of T.Bowen, I.Hardy, G.T.Reinolds, C.R.Sun, G.Tagliaferri, and A.E.Werbrouck (Phys. Rev., 119, 2030, 2041, 1960) for the production

The main requirements to be satisfied by the carriage lighting equipment are stated. Operation and characteristics of a cross-field d.c. generator are compared with those of a synchronous generator feeding the circuit through rectifiers; the latter system fulfils the above requirements. Results of laboratory tests are reported. Practical tests on railway coaches are recommended.

TITLE: System of Electric Supply to Passenger Cars With Rectified Current

PERIODICAL: Narodnoye kh-vo Sov. Latvii, 1957, Nr 1, pp 11-14

ABSTRACT: Practice has shown that an electric-supply system with an RD-2 generator is unreliable for all-metal cars. Institut energetiki i elektrotehniki (Institute of Power and Electrical Engineering), AS Latviyskaya SSR, developed a new rectified-current supply system. The story of its development and a description of the system are given. A contactless 3-phase synchronous generator is the source of energy; the principle of externally-closed magnetic flux is used in the generator design which permits building the rotor from simple steel castings and placing the field winding on end shields. The generator has 2 stator windings (principal and additional) which supply 2 rectifiers. A contactless voltage regulator acting on the principal generator-

Card 1/2

SOV/112-59-5-9132

System of Electric Supply to Passenger Cars With Rectified Current

field winding serves to maintain constant voltage in the train line. The generator functioning and the electrical circuit of the system are described in detail. The system has the following advantages: (1) the contactless design of the generator and regulator greatly increases reliability; (2) the storage battery is charged, when the train is in motion, 24 hours a day, independently of the load; this permits cutting the battery rated capacity; (3) during the train stop, it is possible to charge the batteries and to supply consumers directly from the station 3-phase, 50 cps, 380/220-v line via an auxiliary transformer; (4) the contactless feature of the generator and the voltage regulator abruptly decreases the level of the noise caused to the train radio.

TITLE: Interpole Magnetomotive Force in a Synchronous Machine

PERIODICAL: Tr. in-ta energ. i elektrotekhn. AS Latviyskaya SSR, 1958,
Nr 6, pp 155-174

ABSTRACT: In designing the synchronous-machine characteristics with an allowance for the field-pole leakage flux, an interpole magnetomotive force (between the pole tips) plays an important role. Formulae are deduced and graphs presented that permit, with a certain minimum of initial data, determining the interpole magnetomotive force with an allowance for saturation change and for the different shape of the flux-density-distribution curves; the flux density is created by the field winding and by the direct-axis component of the armature reaction.

PURPOSE: This collection of articles is intended for technical personnel concerned with electrical supply systems for means of transportation.

COVERAGE: This collection is the third in a series of works of the Institute of Power and Electrical Engineering, Academy of Sciences Latvyskaya SSR, which deal with problems connected with the electrical supply systems for transportation. Many of the articles deal with electric generators of electric power-supply systems for railroad passenger cars, with emphasis placed on the design of a

TITLE: Synchronous Electromotors ДМК-1 (DMK-1) and ДМК-2 (DMK-2) Without Contacts

PERIODICAL: Byulleten' tekhniko-ekonomicheskoy informatsii, 1960, No. 7, pp.31-33

TEXT: The efficiency increase in low-voltage distribution networks can be attained by replacing asynchronous electromotors by synchronous ones. - The Institut energetiki i elektrotekhniki Akademii Nauk Latviyskoy SSR (Institute of Power- and Electric Engineering of the Academy of Sciences Latviyskaya SSR) designed two types DMK-1 and DMK-2 of synchronous electromotors without contacts, differing in the main from the common synchronous motors with salient poles by the absence of a revolving exciting winding and, consequently, of collecting rings and brushes. The figure shows the longitudinal cross section of the DMK-1-motor. In contrast to the common stator of synchronous or asynchronous motor; stator 1 has bedplate 2, which is a part of the magnetic circuit, and is made therefore of cast steel or rolled iron. The rotor has two pole systems 3, set on the shaft, each of which represents a cylindric steel casting with three claw-shaped pole overhangs

Card 1/4

S/193/60/000/007/007/012
A005/A001

Synchronous Electromotors ДМК-1 (DMK-1) and ДМК-2 (DMK-2) Without Contacts

of a special shape ensuring sufficiently high motor properties both under synchronous and asynchronous (starting) conditions. The pole systems are mounted on the rotor shaft in such a manner that the poles of one system are in the interpole gaps of the other system. Due to the different polarity of the pole systems, the normal alternation of the polarity is obtained in the rotor periphery. The bearing brackets 4 are also produced of cast steel and have ring-like tongues embracing the cylindric parts of the rotor pole systems with a small gap of 0.5 mm; on their external surface, exciter coils 6 of simple ring shape are placed which are supplied from a semi-conductor rectifier. Therefore, the magnetic flux in the DMK-1 motor is excited from the stationary coils on the bearing brackets, and the rotor has no windings and contact rings. The asynchronous start of the motor is brought about by eddy-currents, induced in the solid pole ends by the revolving magnetic flux caused by the three-phase alternating current in the stator winding. - The DMK-2-motor is a second modification of higher performance and differs from the DMK-1-motor by lesser sizes and the design of the components. The most substantial structural peculiarity of the DMK-2-motor is the steplike shape of the rotor cylinders and the ringlike tongues of the brackets, which

TITLE: The Multi-Purpose Noncontact A-C and D-C 5T-1 (BP-1)²⁵ Generator⁴⁵

PERIODICAL: Byulleten' tekhniko-ekonomicheskoy informatsii, 1960, No. 11, pp. 38-40

TEXT: The Institut energetiki i elektrotekhniki (Institut of Power Engineering and Electric Engineering) of the AS of the Latvian SSR designed in 1959 the multi-purpose noncontact BP-1²⁵ generator (see Figure) intended for the generation of alternating or direct current. Besides, this machine can also operate as double current generator and self-starting synchronous motor. It operates with two voltages, viz. 50 and 100 v. The basic element is the three-phase four-pole noncontact synchronous C3-5 (SV-5) generator in enclosed execution. The continuous power of the generator at a speed of 1,500 rpm amounts to 8 kva, the frequency is 50 cps, the rated phase voltage is 25 or 50 v, the line voltage is 43 or 86 v.

TITLE: Direct-axis magnetic field in the airgap of a synchronous machine with trapezoidal claw-shaped poles

SOURCE: AN LatSSR. Institut energetiki, Magnitnoye pole v elektricheskikh mashinakh (Magnetic fields in electrical machines). Riga, Izd-vo Zinatne, 1965, 43-103

TOPIC TAGS: electric machine, inductor machine

ABSTRACT: As the poles are key-shaped, an equalizing axial magnetic flux arises in the machine which changes the distribution of magnetic induction in the airgap and, as a corollary, changes the values of excitation field coefficients k_f , k_ϕ and direct-axis armature-field coefficients k_d , k_{ad} , $k_{\phi d}$. These simplifications are adopted:
(1) The machine active cylindrical surface is developed into a planar surface;
(2) The effect of armature teeth is neglected; (3) Core permeability across its

Card 1/2

L 27046-66

ACC NR: AT5001744

laminations is negligible. A generalized Laplace equation is set up for three components (Cartesian coordinates) of the magnetic potential. This equation combined with pertinent boundary conditions is treated as a second boundary (Neumann) problem and solved by the eigen-function and double Fourier-series techniques; as a result, formulas describing the magnetic field in the yoke are developed. The magnetic field in the armature core is determined from the same initial Laplace equation by similar techniques. The magnetic field at the yoke-armature boundary is determined on the basis of the two above findings. The magnetic potential at the armature active surface varies only along the armature length; six theoretical cases are considered. The induction in the principal airgap is distributed nonuniformly in all practical cases of laminated armature; the nonuniformity is particularly pronounced when the yoke-armature gap is present or when the yoke is omitted. The variation of the armature-core magnetic potential along the armature length (across the laminations) is explored; in the armature mid-section, the potential changes its direction and is an odd function with respect to this section. The axial component of the induction and axial flux in the armature core are even functions with respect to the core mid-section. The induction at the yoke-armature boundary also changes its direction in the core middle and is an odd function with respect to this point. Seven extensive Supplements present details of the mathematical operations used in the article. Orig. art. has: 11 figures and 300 formulas.

TITLE: The methodology of selecting the basic dimensions for a synchronous machine with claw-like pole structure and an internal magnetic circuit

29

SOURCE: AN LatSSR. Institut energetiki. Beskontaktnyye elektricheskiye mashiny, no. 4, 1965, 141-155

TOPIC TAGS: electric motor, synchronous electric motor, magnetic circuit, magnetic induction, magnetic structure

ABSTRACT: The authors provide a detailed design analysis of synchronous induction motors with claw-like pole structure. A cut-off of a typical motor of this type is shown in figure 1. Because of the compactness of the stator structure (which contains the inductor poles, the excitation windings, the internal magnetic circuit and other components) the feasibility of construction is determined to a large degree by the correct selection of the bore in the stator. While the usual approach to calculate several design variations is used, this paper describes a more rigorous design method based on performance and overall size requirements. The main dimensions of the motor are given by

$$D_r = D_o + 2h_w + 2h_p \quad (1)$$

Card 1/2

L 08816-67

ACC NR: AT6023093

0

where D_r is the rotor diameter, D_c is the cylinder diameter, h_w is the radial coil (excitation windings) dimension, and h_p is the radial pole dimension (height). Separate solutions for each variable in this formula (1) are given, based on the normally

available design information. A step-by-step design procedure is included with practical approximations for the derived expressions. Fundamentally, the selection of a particular geometry is dictated by a given electromagnetic load and the allowable temperature rise in the windings. Orig. art. has: 6 figures, 62 formulas.

PHASE I BOOK EVALUATION

SOV/226

Subgroup English, 1, 17. *Handbook of Catalysis*, 4 (Scientific Notes, Vol. 14, Chemistry Society, 1957), 351 p., 350 copies printed.

Ed. (Title page): A.F. Steynin, Professor, Doctor of Chemistry I.K. Lapin, Member of the Academy of Sciences Latvian SSR, Professor, Doctor of Chemistry G.I. Yanig, Professor, Doctor of Chemistry, Tech. Ed.: A. Peterson.

Summary: This book is intended for inorganic chemists and scientists in the chemical laboratories.

Comments: The book contains 22 articles on organic chemical synthesis and analysis materials. Its periodicals are mentioned. Figures, tables, and references accompany the articles.

2. *Radom, S., A. Steynin, B. and E. Gulbishteva.* The Use of Sodium Tetrahydroborate in Qualitative Analysis 9
3. *Radom, S., A. Steynin, B. and E. Gulbishteva.* The Lanthanum of Aluminum Oxide by Arsenic 17
4. *Radom, S., B. Steynin, B. and E. Gulbishteva.* Resistance of the Boundary Layer, Electrode Potential, and the Corrosion of Aluminum in Aluminum Sulfate Solutions 25
5. *Radom, S., B. Steynin, B. and E. Gulbishteva.* Ligand as a Reagent for Qualitative Determination of Aromatic Nitro Compounds 35
6. *Radom, S., B. Steynin, B. and E. Gulbishteva.* The Interaction of 2-Amino-2-Phenyl-1,3-Propanediol with Primary Nitro 41
7. *Radom, S., B. Steynin, B. and E. Gulbishteva.* On the Predicted Mechanism of the Alkylation of Naphthalene and Diphenylmethane with Alcohol Using a Hg Catalyst 49
8. *Radom, S., B. Steynin, B. and E. Gulbishteva.* Study of Oxalic Acid and Its Derivatives 49
9. *Radom, S., B. Steynin, B. and E. Gulbishteva.* The Concentration of Pyrocarbons of Ethanol Oxide and Their Influence on Pyrocarbons 79
10. *Radom, S., B. Steynin, B. and E. Gulbishteva.* The Problem of Preliminary Pyrolysis of $(C_2H_5O)_2Si(CH_3)_2$ with Water and Acid before Cooling Catalysts in the Solvate Process 89
11. *Radom, S., B. Steynin, B. and E. Gulbishteva.* Properties of Typical Clays of the Latvian SSR 99
12. *Radom, S., B. Steynin, B. and E. Gulbishteva.* Properties of Opium Calcined at Low Temperatures 123
13. *Radom, S., B. Steynin, B. and E. Gulbishteva.* The Use of Lipophosphorylamine for the Production of Binding Substances 145
